

Task 1: Set Up n8n and Push Progress to GitHub

DevSynt AI Automation Internship Summer 2026 Track: AI Automation

Mentor: Afnan Shoukat
Submitted by: Alishbah Nayab

Deadline: Friday, 5:00 PM
Date completed: July 27, 2026

Objective

The goal of this task was to:

1. Install and run n8n locally.
2. Expose n8n to the internet using ngrok with a static (non-changing) domain.
3. Create a GitHub repository for the internship and push progress

Step 1: Install and Run n8n

- Installed **Node.js (LTS)** from nodejs.org to enable npm-based installation.
- Installed n8n globally using:
- `npm install n8n -g`
- Started n8n with:
- `n8n start`
- n8n successfully launched and became accessible at:
- `http://localhost:5678`
- Created an n8n account (owner account) and confirmed the editor loaded correctly.

Step 2: Expose n8n via ngrok with a Static Domain

- Signed up for a free account at ngrok.com.
- Claimed a free static domain from the ngrok dashboard:
- `huntsman-untapped-subwoofer.ngrok-free.dev`
- Installed ngrok via the **Microsoft Store** installer (Windows).
- Added the ngrok authtoken:
- `ngrok config add-authtoken <MY_AUTH_TOKEN>`
- Started the tunnel on port 5678 (the port n8n runs on):
- `ngrok http 5678 --url=huntsman-untapped-subwoofer.ngrok-free.dev`
- Confirmed the tunnel was live — ngrok showed:
- Session Status: onlineForwarding: `https://huntsman-untapped-subwoofer.ngrok-free.dev -> http://localhost:5678`
- Opened the static domain in the browser and confirmed the same n8n editor loaded (bypassing ngrok's one-time browser warning screen).
- This confirmed n8n was reachable from outside the local machine via a fixed public URL.

Note: An initial attempt using a .app domain suffix failed with `ERR_NGROK_313` (custom subdomains not allowed on the free plan). This was resolved by using the exact domain assigned in the ngrok dashboard, which ended in .dev rather than .app.

Step 3: Create GitHub Repository

- Created a new repository on GitHub named:
- devsynt-ai-internship-alishbah
- Added a README.md including:
 - "DevSynt AI Automation Internship – Summer 2026"
 - A short description of the repo's purpose (tracking weekly task progress)
- Committed and pushed the initial commit to the main branch

Proof of Completion

- ✓ n8n running locally at <http://localhost:5678>
- ✓ n8n accessible externally via static ngrok domain <https://huntsman-untapped-subwoofer.ngrok-free.dev>
- ✓ Screenshot captured showing the n8n editor loaded through the ngrok static URL (see attached screenshot)
- ✓ GitHub repository created and initial commit pushed

Submission

1. **GitHub repo link:** <https://github.com/Alishbah-Rajpoot/devsynt-ai-internship-alishbah>
2. **Screenshot:** n8n editor open in browser via static ngrok URL (attached separately)
